Summary

Software Development Engineer with experience building and deploying scalable full-stack business applications, RBAC systems, financial workflow platforms, and cloud-based infrastructure using Django, PostgreSQL, MySQL, and AWS. Developed production-grade solutions including expense management systems, OCR-powered automation workflows, permission management platforms, and multi-site deployment architectures with strong focus on scalability, security, and operational efficiency.

Skills

- **Backend:** Python, Django, Django REST Framework
- **Frontend:** HTML, CSS, Bootstrap, JavaScript, React
- **Database:** MySQL, PostgreSQL, SQLite
- **Cloud & Deployment:** Amazon Web Services (AWS EC2), Nginx, Gunicorn, Google Cloud Platform (GCP)
- **Tools & Platforms:** Git, GitHub, Linux
- **ERP & Workflow Systems:** Manufacturing ERP, Inventory Management, Purchase Order (PO), Goods Receipt Note (GRN), Role-Based Access Control (RBAC) , Billing Systems , POS
- **Automation & Integrations:** OCR (Tesseract), Barcode & QR Code Systems, AJAX, REST APIs, JWT Authentication
- **Data & Reporting:** Dashboard Development, Reporting Systems, Workflow Automation
- **Professional Skills:** Problem Solving, Team Collaboration, Project Management, Adaptability, Verbal & Written Communication

Education

Presidency University , BTECH in Computer Science and Engineering — July 2024

- GPA: 7.48/10.0
- Bengaluru

Presidency College ,Intermediate — May 2020

- Percentage: 74.8/100
- Bengaluru

Nalanda High School ,Science — May 2018

- Percentage: 82.88/100
- Bengaluru

Experience

Software Development Engineer, Xpredict Automation Solutions, Bengaluru — December 2024 – Current

Expense Management System

- Engineered a full-stack expense, voucher, and advance management platform with role-based access control, enabling end-to-end tracking of internal/external expenses, approvals, advance settlements, overdue calculations, bill payments, dashboards, exports, and audit-ready financial workflows.
- Built intelligent automation features including OCR-based invoice data extraction using Tesseract, multi-proof document management, automated notifications, dynamic reporting dashboards, Excel export systems, and real-time payment tracking to reduce manual effort and operational errors.
- Developed scalable administrative and finance workflows including custom approval hierarchies, user activity controls, payable analysis, advance allocation tracking, and centralized monitoring tools for finance teams and administrators.

Role Based Access Control

- Built a full-stack Role-Based Access Control (RBAC) platform using NestJS, Prisma, PostgreSQL, Vite, and JWT-based authentication, enabling secure user authorization, hierarchical permission management, and dynamic access control workflows.
- Designed and implemented an advanced permission inheritance system where users automatically inherit permissions from assigned groups while supporting user-specific permission overrides, solving real-world enterprise access management and authorization complexity.
- Developed and deployed a self-hosted admin management dashboard with Prisma-style relational data management, API-driven schema handling, PostgreSQL integration, and production-ready deployment using PM2, enabling persistent backend/frontend services and scalable on-premise access control administration.

Indent Software

- Developed and deployed a full-scale Manufacturing ERP system using Django, covering Project Management, Material Indents, Purchase Orders, GRN workflows, Inventory Management, QC tracking, Production Monitoring, and role-based access control (RBAC) with responsive dashboards and real-time analytics.
- Engineered end-to-end procurement and manufacturing workflows to solve operational challenges including stock shortages, partial GRN processing, internal material transfers, vendor coordination, approval bottlenecks, OCR-based invoice processing, barcode/QR inventory tracking, and live inventory synchronization across departments on AWS EC2 with Nginx and TLS-secured deployment.

Amazon Web Services

- Designed and deployed a multi-site production architecture on AWS EC2 using Nginx, Gunicorn, systemd, and Django, managing multiple applications across custom ports with HTTPS, reverse proxying, process supervision, and static/media file handling.
- Implemented secure and scalable web infrastructure including SSL/TLS configuration with Let's Encrypt, HTTP→HTTPS redirection, domain routing, upload handling, static file offloading, Gunicorn worker management, and Linux service orchestration for high-availability Django applications.
- Engineered and maintained end-to-end backend systems featuring RBAC permissions, OCR-based invoice processing, voucher and billing workflows, production logging/monitoring, automated deployment pipelines, and optimized EC2 resource management for cost-efficient cloud operations.

Full Stack Developer Intern, Xpredict Automation Solution, Bengaluru Oct 2024 – Dec 2024

- Developed software to manage and maintain comprehensive reports for internal use.
- Built automated solutions to streamline and simplify expense calculations.
- Collaborated with a cross-functional team to deliver scalable, maintainable, and effective software solutions tailored to organizational needs.
- Implemented a robust role-based permissions and privileges system to ensure secure and controlled user access.

Certifications

Google Cloud Career Readiness Associate Cloud Engineer Track	08/2023
Introduction to Generative AI Learning Path – Google	07/2024
Basics of Python – Infosys	08/2022
JavaScript, CSS – HackerRank	05/2023
Evolutionary Computation for Single and Multi-Objective Optimization (Python)	02/2023
Postman API Fundamentals Student Expert	08/2024
Human Resource Skill Workshop	08/2024
